

La pendenza cresce con rooms perche' il coefficiente di sq_rooms e' positivo

Test della non linearita': $H_0 : \beta_4 = 0$ contro $H_1 : \beta_4 \neq 0$

— densità $N(0,1)$ ■ regione di rifiuto: $|z| > 1,960$ — t su $\text{sq_rooms} = 5,094$ ($p = 5,0e-07$)
